

# Comparing AI-Generated Resumes in Rich Text Format

Raffi O. Molero  
B.S. Computer Science 2-A  
21st Century IT Skills

# Prompt

The following is the full prompt that will be used to compare the output of 2 Large Language Models:

Create a one-page professional resume using the following details:

Name: [Leave a placeholder <name>]

Status: 2nd Year College Student

Email: [Leave a placeholder <email>]

Phone: [Leave a placeholder <phone>]

Education:

Candidate for Bachelor's Degree, Midland State University

Relevant Coursework: Data Structures, Technical Writing, and Systems Analysis

Skills:

Technical: Microsoft Office Suite (Expert Excel), Python (Beginner)

Interpersonal: Public Speaking, Spanish (Conversational), Collaborative Problem Solving

Experience:

Student Assistant, University Admissions: Handled front-end inquiries and managed sensitive student documentation.

Volunteer Coordinator, Local Community Center: Organized a weekend food drive that served 200+ families.

Achievements:

Scholarship Recipient and Member of the University Debate Team.

Use a modern, "Clean Academic" format with clear section headings.

Place Education at the top to emphasize student status.

Use action-oriented bullet points and ensure the layout is concise for an internship application.

The two LLMs used were ChatGPT and Gemini, both left at their default settings when accessed via a web browser. Each test was done in separate InPrivate ("incognito") Firefox tabs without logging in, to prevent information transfer. The prompt was pasted directly into each LLM as input. The respective outputs were then both taken by manually highlighting the relevant text in the browser and copying it, before pasting each output into a separate page in this very Google Doc later exported as a PDF. Both outputs were initially too large to fit in one page, thus the margins were reduced to 0.5" on all sides, and the font size reduced by 2 points on all text at once.

Side note: I had also tested LLM outputs when asked to output in LaTeX and HTML/CSS formats, though the results were too similar and uninteresting to compare, so I went back to the default rich text output. I also felt the resume contents felt quite unrelated to each other, but it's a bit late to change them now. Let's just pretend this is a "Project Manager" position, something that requires coding and speaking skills.

# Output

*The next page will be the output from **ChatGPT**, followed by 1 page for the output from **Gemini**.*

<name>

 <email> |  <phone>

---

EDUCATION

**Midland State University**  
*Candidate for Bachelor's Degree* | 2nd Year College Student

Relevant Coursework:

- Data Structures
  - Technical Writing
  - Systems Analysis
- 

SKILLS

Technical Skills:

- Microsoft Office Suite (Advanced proficiency in Excel, including data analysis and functions)
- Python (Beginner level, foundational programming and scripting)

Interpersonal Skills:

- Public Speaking (experienced through academic presentations and debate)
  - Spanish (Conversational proficiency)
  - Collaborative Problem Solving (team-based academic and volunteer work)
- 

EXPERIENCE

**Student Assistant**  
*University Admissions Office*

- Provided front-line support by addressing student and applicant inquiries in a professional manner
- Managed and organized sensitive student documentation with accuracy and confidentiality
- Assisted staff in streamlining administrative processes to improve office efficiency

**Volunteer Coordinator**  
*Local Community Center*

- Led planning and execution of a weekend food drive serving 200+ families
  - Coordinated volunteers, schedules, and logistics to ensure smooth operations
  - Promoted community engagement through outreach and event organization
- 

ACHIEVEMENTS

- Scholarship Recipient (Academic Merit)
- Active Member, University Debate Team

<NAME>

<phone> | <email> | City, State

---

## EDUCATION

Midland State University | *Candidate for Bachelor's Degree* | **Expected 2028**

- **Status:** 2nd Year College Student
  - **Relevant Coursework:** Data Structures, Technical Writing, Systems Analysis
  - **Honors:** Scholarship Recipient, University Debate Team Member
- 

## EXPERIENCE

Student Assistant | *University Admissions*

- **Streamlined** front-end inquiry processes, providing clear and concise information to prospective students and families.
- **Managed** and organized sensitive student documentation with a high degree of confidentiality and attention to detail.
- **Collaborated** with admissions officers to ensure efficient data entry and record maintenance during peak application seasons.

Volunteer Coordinator | *Local Community Center*

- **Orchestrated** a weekend food drive that successfully provided essential supplies to over **200+ families** in the local area.
  - **Recruited** and led a team of volunteers, delegating tasks to ensure smooth logistics and distribution.
  - **Liaised** with local vendors and donors to secure contributions, demonstrating strong negotiation and communication skills.
- 

## SKILLS

### Technical

- **Microsoft Office Suite:** Expert-level proficiency in **Excel** (Pivot Tables, VLOOKUPs, Data Visualization).
- **Programming:** Beginner-level knowledge of **Python** for basic automation and data handling.

### Interpersonal

- **Communication:** Accomplished in **Public Speaking** through active participation in the University Debate Team.
  - **Languages:** **Spanish** (Conversational proficiency).
  - **Soft Skills:** Collaborative Problem Solving, Team Leadership, and Organizational Management.
- 

## ACHIEVEMENTS

- **Academic Scholarship Recipient:** Awarded for maintaining high academic standards and campus involvement.
- **University Debate Team:** Active competitor focusing on logic, rhetoric, and rapid analytical thinking.

# Comparison

This is a table breakdown of my opinion of each model's performance in specific metrics. More specifics will be discussed in the Reflection; this is simply an overview:

| Criteria        | ChatGPT                                                                                          | Gemini                                                                                |
|-----------------|--------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Structure       | 5/5<br>Produced desired ordering                                                                 | 4/5<br>Skills should preferably come before Experiences                               |
| Clarity         | 3/5<br>Missed some details                                                                       | 4/5<br>Verbose corporate language                                                     |
| Formatting      | 4/5<br>Overuse of parentheses                                                                    | 4/5<br>Prefer ChatGPT's subheadings                                                   |
| Overall Quality | 12/15<br>More visually pleasing and readable, though needs more formality and specificity/detail | 12/15<br>More formal tone, though visually dense and sometimes unnecessarily verbose. |

# Reflection

The biggest difference is that ChatGPT used emoji for email and contact, unlike Gemini. It would be better to use solid black icons instead. Still, for the formal tone and for the “I respect you, you don’t need icons to tell you what’s obvious, you know what you’re looking at” effect of putting the bare information there, I prefer Gemini’s formatting here.

For the structure, ChatGPT put skills before experience, while Gemini put experience before skills. I think hiring managers would prefer seeing broad skills before specific experiences, so I prefer ChatGPT here.

For formatting, ChatGPT uses multiple lines to separate headings from subheadings, while Gemini uses pipe “|” characters. I prefer the clean visual hierarchy from ChatGPT here.

Content-wise, ChatGPT used parentheses to expound on details. Its output sometimes lacks details and reads too informally. Gemini tended to use sentence form, but used excessive “corporate speak”. I slightly prefer Gemini’s output here, though I made it more concise in the final resume.

In terms of creativity, they both look very plain and similar to each other. Besides the emoji, it took careful reading to find the differences listed above. I don’t think it needs to be that creative, just clear.

Unfortunately since the info is fake, I haven’t experienced properly correcting and clarifying life events with prompt refinement. I still tried doing so for the LaTeX and HTML/CSS prompts, with a slightly more believable and detailed prompt, but they weren’t interesting. I didn’t use any of their outputs. So I was left with the outputs from the unrefined prompt.

Still, I learned how much easier it is to organize my thoughts and experiences with AI, and that if I’m not happy with one, I can just use another and compare them, like a doctor’s second opinion. Three hundredth word.

# Final Resume

*The following page is the **final combined resume**, filled with any missing information.*
