

They want your **attention**. Spend it **wisely**.

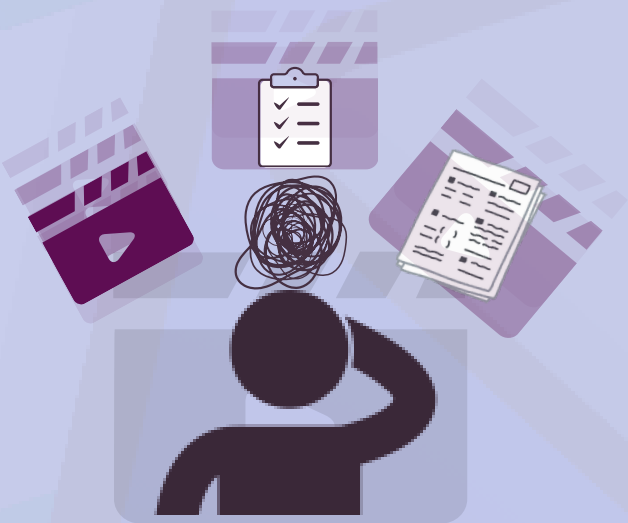

The Data:

- Filipinos spend **3.5 hours a day** on social media.
- **TikTok and YouTube** place in the top 2, with users spending **40 hours and 25 hours per month** on each app, respectively.
- **TikTok and YouTube Shorts** rely on **short-form content** and **limit user agency**.

They are built to maximize engagement:
to **hold your attention** for as long as possible.

What **The Feed** does...

The Science:

- Frequent **short-form** content consumption is linked to **reduced attention span**, as well as **lower academic performance**.
- Overuse may increase **unintentional and habitual** time spent online, signs of **lower self-control** and **time-awareness**.
- Those affected may have difficulty maintaining **focus** during study or work, resulting in **lower productivity**.

Refusing the Feed.

A solution?

This toolset **removes** endless feeds and attention-grabbing features. It shifts **control** back to the **user**. Instead of scrolling, users must actively **choose** what they want to see.

Features:

- Removes algorithm-driven **recommendations**.
- Disables **infinite scrolling**.
- Redirects away from **short-form content**.
- Requires users to **choose** what to view next.
- Supports intentional, **goal-oriented** internet use.
